

Deployed on :-

Link :- <https://quiz-app-api-devw.onrender.com>

Use this api

1) /api/auth/signin (POST)

Takes in

```
{  
  "name": "",  
  "email": ""  
}
```

And return created signin object in the server

2) /api/auth/signout (POST)

Signs out user

3) /api/auth/me (GET)

Shows information about the signed in user

4) /api/question/:id (GET)

Get the question with question id

5) /api/question/:id/checkAnswer (POST)

Takes in

```
{  
  "selectedOption": ""  
}
```

selectedOption will have the index of the option selected by the user and the backend will check if its correct or not.

If correct it will increment the score of the signed in user by the marks of the question

6) /api/leaderboard(GET)

Gives information about the leaderboard

How to start dev server

. refers to the same level as server.js

- Create a file `./config/config.env`
- Add these following fields in ENV:-

```
• ENV=dev
• PORT=4000
• MONGO_URI=
•
• JWT_SECRET=
• JWT_EXPIRE=30d
• JWT_COOKIE_EXPIRE=30
•
• SESSION_SECRET=
```

- Then type “`npm run dev`” to spin up dev server
